AI Agents

From theory to practice

randomowo/2026

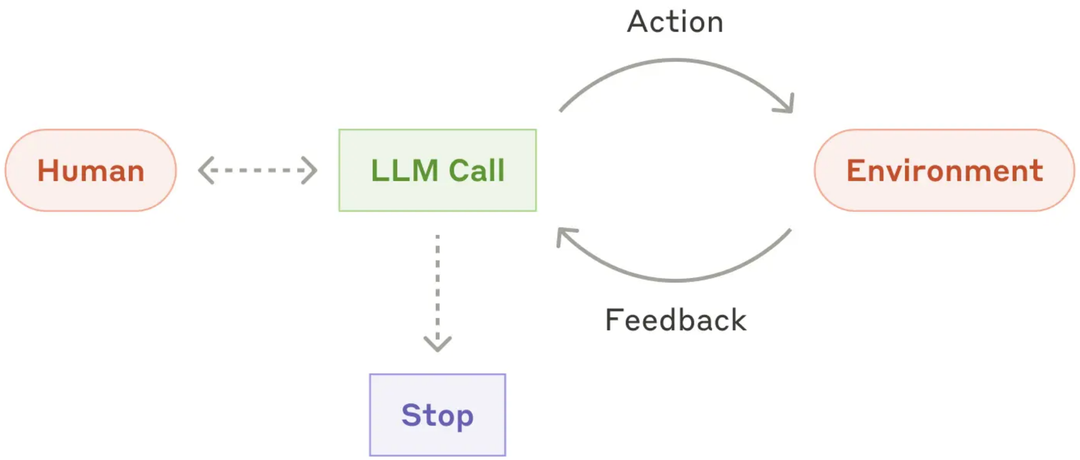
Agents

- What is ai agents? Compare with LLM?
- What is tooling and why MCP matters?
- AI Agents under the hood
- In which tasks you should use ai agents?
- How to make an agent a helper and not a pest?

From text chatter to handyman

What is AI Agent?

- AI Agents = LLM + Tooling + Cycle



SPRINGFIELD
MISSOURI
NEW JERSEY
HEAT SIGNATURE

Give a shovel to the agent

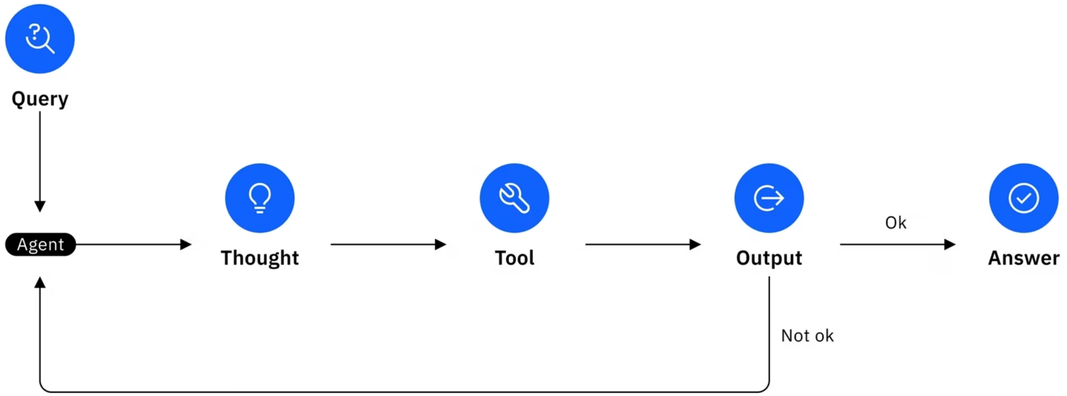
How tooling changes game

- Tools listed in system prompt
- LLM chooses which tool to use and when
- LLM observe tool result
- Variety of instruments is not a problem, MCP exists

Running in circles with benefit

How agents solve tasks

- Tools aren't all you need to solve a problem
- Cycle algorithm - ReAct (Reason-and-Act)



Not a third wheel

When is an agent a helper and when is it a burden?

- **Delegate completely:** Routine tasks (tests, boilerplate code, docs, refactoring, code search)
- **Do together:** Brainstorming (debug, optimization, API design)
- **On your own:** Brain teasers (architecture, requirements analysis, critical changes)

Choosing brain

Which model put under the hood?

- Similar to LLM
- **Complex tasks requiring thought:** A model with a large number of parameters and a “thinking” function
- **Clear actions and routine decisions:** instruct model
- The more thinking and data required, the larger the context window

A Survival Guide with an AI Agent

Rules

- Prepare your information before posting it in the chat
- Don’t expect a quick fix
- Don’t drag out the session (chat)

AI Agents Zoo

Where get an agent?

- opencode (opencode.ai)
- claude code (claude.ai)
- ollama launch
- Integrated in IDE

So Long, and Thanks for All the Fish
